

2010 Terrorism Threat Map

Terrorism Tracker - monitoring threat activities and trends

Terrorism Tracker is a powerful risk management tool available free of charge to Aon's counter terrorism clients.

Updated on a daily basis, the comprehensive global database of terrorism incidents and plots allows users to perform detailed and customised searches according to their areas of concern, assisting the monitoring of threat activities and trends.

The database holds detailed information about events by date, location and by type of incident - from bombings and sabotage to kidnap and cyber attacks. It also provides details of targets by industry sector and information on perpetrator groups.
